

ADVERTISEMENT SWAPPING USING AN AGGREGATOR FOR AN
INTERACTIVE TELEVISION SYSTEM

5

ABSTRACT OF THE DISCLOSURE

An aggregator is provided in connection with advertisement swapping. The aggregator can be implemented in an interactive television system so as to perform real-time aggregation of trigger information for advertisement swapping through cooperation with content providers or third-party entities. The aggregated information can then be made available to set top boxes and/or ancillary devices of subscribers. Advertisement swapping may be performed via use of the trigger information to perform channel switching to a channel that broadcasts substitute advertisements or via use of the trigger information to retrieve substitute advertisements from a storage unit. The advertisement swapping may be performed by devices of opted-in subscribers, or by devices at a broadcast center. The advertisement swapping can also include replacement of original links in the advertisements with substitute links, so that the viewer can experience interactivity and/or receive substitute interactive content associated with the substitute links.
